

In the extensions I started with:

<input type="checkbox"/>	<input checked="" type="checkbox"/>	Hot Joomla Carousel	Geen	Hot Joomla Carousel	Geen	Publiek	Alle	125
--------------------------	-------------------------------------	---------------------	------	---------------------	------	---------	------	-----

With properties:

Titel * Hot Joomla Carousel

Module

Beschrijving

Menutoewijzing

Module Properties

Module Class Suffix

Unique ID

Folder With Images

images/kennel_info/jolie_jolie/carrou

Display Mode

Full Width

Slide Width

25%

Responsive Mode Screen Width

767px

On page 326 I specified:

```
<p style="text-align: center;">{module module="Hot Joomla Carousel" showtitle="false"}</p>
</img src="images/kennel_info/jolie_jolie/logo_jolie_106" alt="" width="330" height="100" />
```

That delivered:

Great!

On a different page (613) I want to display a different carousel.

I started to make a copy of the module-specification:

<input type="checkbox"/>	<input checked="" type="checkbox"/>	Hot Joomla Carousel	Geen	Hot Joomla Carousel	Geen	Publiek	Alle	125
<input type="checkbox"/>	<input checked="" type="checkbox"/>	Hot Joomla Carousel	Geen	Hot Joomla Carousel	Geen	Publiek	Alle	126

And for ID 126 I specified these properties:

Titel *

Module Beschrijving Menutoewijzing **Module Properties**

Module Class Suffix

Unique ID

Folder With Images

Display Mode ▼

Slide Width

Responsive Mode Screen Width

If I insert the same code on page 613

```
<p style="text-align: center;">{module module="Hot Joomla Carousel" showtitle="false"}</p>
</img src="images/kennel-info/folie-folie/logo-folie-1PG" alt="" width="320" height="100" />
```

I get the same carousel as the one I started with.

What should I do to get the second carousel displayed here on page 613?
